

AFRIAGRIFED
DIGITIZING AFRICA'S FOOD SECURITY
FROM AFRICAN SOIL

AFRIAGRIFED APP

Concept Note

OVERVIEW

Founded in 2022 by Efraim Shimbali, Afriagrifed is driven by a powerful vision: to combat Africa's food insecurity by boosting food production to achieve zero hunger. The mission is to create a single platform that unifies key players in agricultural sector in a single platform and maximize their contribution towards boosted food production.

Africa Agriculturally Fed (AfriAgriFed) -Application Concept Note

Afriagrifed Application – is an application that connects 3 main sectors as foundations of food production into one and very interactive platform to boost food production. Technology cannot be prevented and by incorporating it in agriculture through digitizing food security, Africa will be able to fight food insecurity.

Problem Though Africa is the second largest continent in land mass, it is associated with food insecurity and high hunger deaths. The sectors that contribute to boosted food production are far apart from each other. There is no reliable connectivity, no provision of reliable internal information and there is no provision of reliable collected data readily available for use.

Solution **Afriagrifed** App is the solution
A platform developed to group the 3 main sectors of agriculture into one platform. The three sectors being producers (Farmers), market (Consumers) and educators (tertiary institutions).

The platform provides reliable connectivity between the sectors by ensuring an agriculturally focused space. Where credibility and accountability of registered members is not compromised.

The producers relate to the market to capture the demand, and the market relates to the producers to capture the production available and its readiness. The educators relate to producers to help solve problems and assist in scaling production. The educators relate to producers in carrying out research studies of actual problems on the ground as well as provision of internship programs.

That platform captures realistic data, provides it and reliable statistics for consumption by these 3 sectors are made available. Marketing promotion (Advertising), direct sales linkage and educational programs are provided on this platform.

Value proposition The platform provides interactive space for these 3 sectors. Direct benefits are affordable food as it is locally produced. There are reduced unnecessary expenses in obtaining the market for producers and in obtaining products for consumers. Availability of ground problems research space and readily available internship placement spaces, benefit the education sector.

Market space A total addressable market space market size. Size of business to business and business to customers.

The Market strategy is to roll it in Namibia for 4-6 years. Move to SADC from 6-10 years and then Across Africa from 10-14 years.

The projection of marketing is primary made on minimum targets of 3000 users in Namibia, 6000 minimum target users in SADC and 18000 minimum target users in Africa. A minimum target of 27000 users.

Functionality

The app as a product function in the following ways:

- Users are registered. A questionnaire is provided to capture data and verification of users. Users' credibility involves identification numbers, scanning nationality documents, live face recognitions and company or organizations registration numbers. Further verified with relevant institutions are done. **(BIPA, Home Affairs)**
- Users are classified into pages of **Producers, Consumers and Educators**. The additional pages are **products, data, statistics, promotion and programs**.
- Sales to be made by buying directly through the app. A percentage of sales is charged.
- Linkage of sales is also done on the platform. A percentage of sales is charged. Helping producers that are struggling with obtaining buyers. Tracking sales is done to capture data and statistics.
- **Adds page** - promotional page. Charging for promotion depending on days of promotion is done.
- **Chat board** - where suppliers indicate the demand, producers team up to meet demand.
- Provision of data and statistics for personal use is charged for if you are not registered on the app.
- No charging is done for problem solving or educational purposes.
- There are AI prompts for interaction and connectivity.
- Sales linkage to be done. Look into price competition on the app.
- Educators should possess recorded videos of classes or tutorials.

Operations Process

1. The business provides visibility and approaches customers. Through social media adverts, summits, partnerships and face to face.

- Marketing and branding. Make Clothes Designs (White shirts with logo).
- Main target is regional council, governmental bodies partnership (Ministry of Agriculture/Home affairs/)
- Collect list of producers and retailers from BIPA (Presentation).
- **On ground confirmation with regional council.**

2. A video explaining the app usage/goals/operations is presented.

- During marketing /stage 1.

3. The customer registers or is registered.

- An email is sent after registration indicating username and password.

4. A feedback email is sent to the client

- To Appreciate them for registering **(together with the username and password)**

5. A call/illustrative video will follow to present platform usage in case the client is not familiar with usage of the platform

- cursor describing

6. Verification process

- after registering – partnerships with BIPA/home affairs
- should send emails to officials for verifications (**partnership**)
- Verification 1-2 days

7. The regular check in will be done to assist the clients.

- AI prompts to pop up every Sunday.
- Prompts giving feedback on activities of registered people on the app

8. The payment -product verification (to know that the products are there and delivered)

- The members place orders (adding items to carts)
- The supplier must accept the order
- Payment is done via the app
- A portion is paid to the app account/Charges on sales/The producer pays back in the account.
- Indication of shipment, update of product place, and update of delivery.
- The customer confirms delivery of the product.

9. The sales done are tracked,

- products number, amount to populate data and stats

10. Platform will be gifting

- most engaging or active clients once a month.

11. Get feedback from clients

- as to what improvements should be done.

Financial model

The financial model covers the usage of the platform, connectivity on the platform and provision of services as need be. The financial model is structured as follows;

1. A once off registration fee. Data is captured during registration and credibility of registered members is enforced. Registration fee amounts to **N\$ 100.00** is charge. Improve by **5%** yearly.
2. Sales are done through the app. Once sales are made **5%** of sales are charged.
3. For **data** and **statistics** provision, zero fee charged on app but **N\$ 5.00** per page if not registered on App. Free for students providing their students cards.
4. Advertising on the platform, **N\$ 30/ working day** (excluding weekend and public holiday) is charged.
5. Educational programs/training and problem-solving assistance are free.

Financial Projection

The following table indicates financial projection towards revenue generation.

Discription	Estimate	Contribution	Amount
Registration	27 000 users	N\$ 100.00	N\$ 2,700,000
Sales	50% with N\$ 250	N\$ 250.00	N\$ 3,375,000
Adverts	20% for 5 days	N\$ 150.00	N\$ 810,000
Data and stats	1000 pages/year	N\$ 5.00	N\$ 5,000
		Total	N\$ 6,890,000

Organization structure

The app will take a matrix organization to ensure that functionality, maintenance, improvement and sustainability of the service is not compromised. This will hold the following members:

- **Operations Manager** – Running the system and ensuring the product functions and delivers the service as per the consumer's request. Conducting product engagements and collaborations for upscaling.
- **Systems manager** - Focused on improving the app and ensuring that the product runs smoothly and addresses any shortcomings.
- **Marketing Manager** – Responsibility of marketing the app and ensuring that it reaches far corners.
- **Sales Manager** - Working on revenue generation and ensuring that new ways of generating revenue are well organized.
- **Finance Manager** - Controlling finance generated to ensure that dividends are paid to the team and balancing the expenses with profit.

Team Members

The following are team members.

Operations Manager	
Systems Manager	
Marketing Manager	
Sales Manager	
Financial Manager	

Competitors

There are few identified in Namibia. However, none of the competitor groups the 3 sectors in a single platform. This includes:

- Mepya.com
- Fudlink
- NASFAN
- Tap a Meal
